1 Introduction, target group

SRG SSR (the Swiss Broadcasting Corporation) transmits its radio and TV services digitally as Free-to-Air services (FTA) via DVB-S2.

Thanks to the technical characteristics of the system, satellite broadcasting (DVB-S2) allows the highest quality transmission of all SRG SSR TV and radio services, including any additional data. The DVB-S2 vector therefore constitutes the reference vector.

In accordance with legal requirements regarding basic coverage in Switzerland, TV services are also transmitted terrestrially via DVB-T. The DVB-T system is described in a separate document: ”DVB-T White Paper, digital transmission signal characteristics”.

Digital radio services are broadcast via DVB-S2 and also via DAB+. Details relating to DAB+ transmission are given in the document ”DAB+ White Paper, digital transmission signal characteristics”.

The present document describes the digital transmission signal characteristics of the DVB-S2 system. Target group:

- Manufacturers of receivers
- Redistribution specialists
- Specialist dealers
2 Terminology and basic information

Terminology
The ETSI Standards define minimum (mandatory) DVB transmission characteristics, which are supported by all broadcasters. In addition, DVB offers further (optional) characteristics for optimizing reception, some of which are supported by SRG SSR. The term "Service" is used in DVB terminology in preference to "Programme". Numerical values are stated either in binary (prefix: bin), hexadecimal (prefix: 0x) or decimal notation (prefix: dec or no prefix).

Encryption
Partial DVB-S2 encryption of TV services or individual TV broadcasts is undertaken for copyright reasons and serves to limit reception to Swiss territory. Satellite radio services are transmitted unencrypted.

HDTV, DVB-S2
The HDTV services are transmitted by SRG SSR solely by satellite.

Operating data
Some operating data and parameters are subject to dynamic modification, for example IDs, frequencies, bitrates, etc. Some of the currently valid operating data are listed in this document or may be found on the SRG SSR website www.broadcast.ch. For the most part, the present document only states characteristics of a static nature or value ranges according to standards.

General information relating to SRG SSR
General information about SRG SSR TV and radio services may be found at: www.srgssr.ch and www.broadcast.ch
3 Mandatory/optional distinction

Mandatory tables are presented as orange-coloured elements in the following overview; optional tables are listed as white-coloured elements. Figure from ETSI EN 300 468 V1.15.1 (2015-12):
4 Overview of HDTV / DVB-S2 migration

From 29 February 2016 the standard-quality TV services (SDTV) provided by the SRG SSR enterprise units are removed from satellite and HDTV-only services are currently on air via satellite.

At the same time the transmission mode of all SRG SSR transponders (Eutelsat Hotbird 13° East No.17/13C and No.123/13B) are switched to DVB-S2 modulation.
5 Document structure

This document is divided into the following functional blocks:

- **Signal characteristics** (components, parameters, signalling, etc.)
- **Transmission characteristics** (modulation, error control and further distribution signal characteristics)
- **Receiver characteristics** (technical requirements for receivers)
6 Signal characteristics

6.1 Elements of DVB-S2 Radio Services (audio, EPG, data)

6.3 DVB SI Tables

SRG SSR in principle transmits all mandatory tables. This document describes only those tables and descriptors which contain values typical of SRG SSR. The descriptors contained in the tables may in turn be mandatory or optional; this is pointed out in the text.

6.3.1 NIT

The NIT (Network Information Table) describes broadcasting system and network characteristics. The specific characteristics of the satellite system are described by the "Satellite Delivery System Descriptor".

<table>
<thead>
<tr>

### 6.3.3 EIT

**DVB-SI Tables**

EIT – Event Information Table (actual TS)
- "EIT other" not supported at this time
- Reference: ETSI EN 300 468 V1.15.1

<table>
<thead>
<tr>
<th>Element</th>
<th>Description (present/following)</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service ID</td>
<td>see <a href="http://www.broadcast.ch">www.broadcast.ch</a></td>
<td></td>
</tr>
</tbody>
</table>
| Transport Stream ID | . Transponder 17: 0x06A4 (1700)  
. Transponder 123: 0x300C (12300) | |
| Original Network ID | 0x013E (318) | |

| Running Status (Event) | undefined (scheduled events)  
. not running (following event)  
. starts in a few seconds / starts soon  
. pausing (pause present event)  
. running (present event) | Event Running Status can be used by CE devices for PVR control (event transition and event status). See EBU Tech 3333 and ETSI TR 101211 V1.9.1 (2009-06) |
| Free/CA mode | 1, CA Mode (active)  
0, CA Free (for all radio events and in part for "SRF info HD" TV events) | Conditional Access State relating to events (in contrast to services; CA for services: see SDT)  
Because of copyright issues TV services (events) are always scrambled – exception: "SF info HD" service: Events could be partly non-scrambled.  
No scrambling of radio services (events). |

| PDC Descriptor (EIT p/f) | Supported, ("digital VPS") | PIL – Time stamp of event (expected/planned start time).  
Example: 0x86219 (549401), day: 16, month: 12, hour: 8, minute: 25 |
| Short Event Descriptor | Max. 248 characters  
Character Set: Latin No. 5 (8 bit) control code: 0x05 | Event name and short description of event |
| Extended Event Descriptor | Max. 1000 characters  
Character Set: Latin No. 5 (8 bit) control code: 0x05 | Extended description of event (content) |
| Content Descriptor | Supported  
. Content nibble level 1+2 | Type of event. Example: 0x2/0x0 News/Current affairs (general) |
| Content Descriptor | Not supported at this time | |
| Component Descriptor (audio) | HDTV:  
. Stream content: 0x04, DD AC-3 Multichannel Audio  
. Component type:  
. 0x44, DD 5.1 AC-3 Multich. Audio  
. 0x42, DD 2.0 AC-3 Multich. Audio  
. ISO 639 language code: ger, fre, ita, eng | |
Component Descriptor (AD)
- Stream content: 0x02
- Component type: 0x40
MPEG-1 Layer2 Audio Description (AD) for the visually impaired

Component Descriptor (video)
- HDTV:
  - Stream Content: 0x05 H.264/AVC Video
  - Component Type: 0x0B, H.264/AVC high definition video, 16:9 aspect ratio, 25/50 Hz

Component Descriptor (teletext subtitles)
- Stream content: 0x03
- Component type: 0x01
EBU teletext subtitles

Component Descriptor (sign language, in-vision)
- Component type: 0x30
open (in-vision) sign language interpretation for the deaf

- EIT Schedule (optional)

EIT Schedule
- 7 day schedule overview
Can be used by CE devices for event scheduling and PVR control/programming

The SRG SSR CA system (copyright law / restriction of reception to Swiss territory) is based on Clv1 and Viaccess Smartcards. For details, see CAT.

6.3.4 EIT – Event Transitions and PVR Control (Event Running Status etc.)

For PVR recording, receivers may implement various methods, based on:
- Manual programming (user defined date/time)
- Usage of PDC_Descriptor (PIL), say “digital VPS” – supported by SRG SSR TV services
- Usage of EIT p/f (schedule) information and transitions – supported by SRG SSR services
- or a combination of above elements

Smart recording methods which make use of these elements are known as “accurate recording” or “perfect recording”, etc. Although DVB-S2 EIT information is correctly updated at any time - also in case of delay or removing of events -, it is recommended to extend the recording time by a certain (user defined) time offset.

The following table shows the status value of an event (schedule and present/following in EIT):

<table>
<thead>
<tr>
<th>Value</th>
<th>Running_Status (Event)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>undefined / scheduled</td>
</tr>
<tr>
<td>1</td>
<td>not running</td>
</tr>
<tr>
<td>2</td>
<td>starts in a few seconds / starts soon</td>
</tr>
<tr>
<td>3</td>
<td>pausing</td>
</tr>
<tr>
<td>4</td>
<td>running</td>
</tr>
</tbody>
</table>
Present / Following Event Transition:
The following diagram shows possible event transitions:
**Scheduled Events:**
There are never gaps in the schedule. A planned event always starts at the time at which the previous event ends. Present and following events are generated based on scheduled events (copy), with a change of status. An event not existing in the schedule cannot be a present or a following event. If an event in the schedule changes, the generated present and following events are changing as well.

<table>

<td>Next Offset Value (Winter/Summer)</td>
</tr>
</tbody>
</table>

### 6.3.7 BAT (optional)

The BAT (Bouquet Association Table) is currently not supported by the SRG SSR DVB-S2 system.

### 6.3.8 RST (optional)

The RST (Running Status Table) is currently not supported by the SRG SSR DVB-S2 system.

Please note: the RST should not be confused with the event-based Running Status in the EIT (p/f).
6.4 MPEG PSI Tables

The MPEG PSI tables PAT CAT PMT are supported as standard. This section mentions only those descriptors and attributes which contain values typical of SRG SSR.

6.4.1 PAT

</tr>
</tbody>
</table>

At present no dynamic signalling concerning audio language is transmitted in the PMT. In future the language versions of the audio channels could be signalled at event level using "ISO 639 Language Descriptors", i.e. the actual language is signalled in each case.
### 6.5 Video Coding Layer (VCL), HDTV

**Video Coding Layer (VCL), HDTV**

MPEG4 H.264 HDTV Video

</tr>
<tr>
<td>Symbol rate</td>
<td>29.700 MSym/s</td>
</tr>
</tbody>
</table>
8 Miscellaneous

- As far as "FTA Content Management Descriptors" (HDTV) are concerned, SRG SSR intends to follow EBU requirements.
- The SSU (System Software Update) mechanism is not supported by SRG SSR. Other TV or data services on the same satellite or transponder are available to producers as alternatives to SSU.
- The SRG SSR CA system (copyright law / restriction of reception to CH territory) is based on Clv1 and Viaccess Smartcards. At the moment, Smartcard versions V2.6/3.0, 4.0, 5.0 and 6.0 are supported.
- Audio levels / loudness:
  - Radio Services: The audio signals are transmitted with a loudness level of -20 LUFS (cultural/classic services) and -16 LUFS (other services).
  - HDTV Services: The audio signals are transmitted with loudness levels of -23 LUFS, according to EBU R128 recommendation
- TV EPG – Series Identification:
  Event names of TV series are not changed. For series handling, PVR recording control can reference to event names.

9 Receiver characteristics / SRG SSR recommendations

Together with the European broadcasting corporations, incl. SRG SSR, the EBU has drafted minimum technical guidelines for HDTV receivers. The result was published in 2009 in EBU recommendation "EBU Tech 3333":

SRG SSR expects receivers to fulfil EBU recommendation Tech 3333.
10 Future prospects

10.1 Radio EPG
The present/following information contains descriptions of songs (title, performer). Optionally and depending on the individual radio services, a radio broadcast grid may possibly be transmitted via the EIT Schedule; timing of this and whether the option will be supported is not yet clear. Btw: Song information is also transmitted for radio services in the DVB signal via the UECP RDS-RT Stream; this information may be displayed by the receiver display (GUI / alphanumeric displays).

10.2 EBU Teletext, EBU Teletext Subtitles
Teletext and Teletext Subtitles are supported. A new feature will be the use of Teletext Level 2.5. Level 2.5 is backwards compatible, meaning that Level 1.5 teletext decoders can still fully display the content.

10.3 DVB Subtitles
There are no plans at this time for DVB subtitle support.

10.4 HbbTV Subtitles
HbbTV subtitles may be supported soon.

10.5 HbbTV
Basic services via broadcast DSM-CC as well as extended services via IP broadband (if TV set is connected to the internet) are available. New services such as live radio streams and live event video streams are supported or coming soon.
11 Standards/Recommendations

All SRG SSR DVB broadcasting systems are covered by the relevant standards and recommendations from the following European and international organizations:

- EBU, ETSI, DVB, MPEG, ISO, CEI, CEN, DIGITALEUROPE etc.
